technical reference

geometrical boundary conditions	
experimental area	2m left, 2m right , 3m behind last valve. Concrete experiment platform (2m x 2 m) on air bearings available
last valve	DN 63 CF window valve (for optical set-up with zero order remind the wedge effect!)
focus position	1190 mm from last valve
focus height above floor	1760 mm from floor 1410 mm with concrete experiment platform with air bearings 1460 +/- 10 mm with concrete experiment platform without air bearings
beam orientation	horizontal

vacuum requirements	
max. pressure	< 5×10^{-9} mbar at last valve, live zero point signal for interlock
oil free vacuum system	yes

infrastructure at experimental station	
electrical power supplies	220V, 380 V max 44 kVA
demineralized cooling water	closed system, forerun 30° / 10 bar, return run *42° / 2 bar
pressurized air	8 bar
oilfree exhaust line	available
exhaust line for poisonous gases	available
He-recycling system	available
computer network	available

technical reference (continued)

data acquisition	
control system	DeltaTau-Pmac, ID-monochromator control system (VME)
data-acquisition computer	Personal Computer, measurement bus-extention, OS/2-operating system Personal Comuter, National Instruments, PXI-System
data-acquisition software	EMP II, Measurement Program M
remote control	DAMC-protocol
